## Formulation

Compound fertilizer in **MINIGRAN®** form. **MINIGRAN®** is a micro-granule with dimensions between 0.8 millimeters and 2.5 millimeters, of which at least 80% is between 1.0 and 2.0 millimeters.

- Each granule contains the same proportion of ingredients
- Controlled nutrient release due to the meticulous selection, amount and specific characteristics of the high-quality raw materials used, as well as the production process
- Up to 60% more efficient distribution for uniform color and growth
- Will not be picked up while mowing. The fertilizer goes deep into the turf canopy.
- Phosphorous sources are easily taken up for better root development
- Faster starting action with extended nutrient release
- Low in odor and dust
- Easy to apply with all measuring devices and professional applicators
