

Knighthawk®

Controls and prevents:

Poa annua, goosegrass, crabgrass, broadleaf signal grass and over 25 species of other grassy and broadleaf weeds on golf courses (excluding putting greens), landscape plantings, sod farms, residential and commercial lawns and in nursery/ornamental plantings

Get Pre-Emergence Weed And Grass Control All Season Long, For One Low Cost.

Knighthawk® brand prodiamine is an effective pre-emergent herbicide that controls a broad spectrum of problem grasses and broadleaf weeds on golf courses and other turf as well as in nursery and landscape plantings. With its exclusive value-added formulation, Knighthawk provides outstanding early control and season-long control, at very economical

prices. Its extended length of performance also means that Knighthawk gives you valuable flexibility in your application timing. In addition, Knighthawk is non-staining, so you can use it in more places.

Features	Benefits
Extended length of control	Application flexibility and better control—Knighthawk applied in fall or spring can provide control of crabgrass and other troublesome grasses and weeds throughout the growing season
Broad spectrum of pre-emergent control	By controlling more than 30 grasses and broadleaf weeds, Knighthawk reduces the number of products that you inventory and apply
Low solubility	Used as directed, Knighthawk stays where it's applied as it binds tightly to soil particles; No need to worry about run-off or product movement once it has been properly applied and incorporated into the soil
Non-staining formulation	Can be used around buildings, fences, sidewalks, driveways, walkways and landscape features, with no concern about unsightly staining
Low volatility	Can be used in and around sensitive landscape plantings, nursery crops and native vegetation areas

Directions For Use:

Apply once, prior to weed germination, or use two sequential applications to prevent later weeds throughout the growing season. Use a low-pressure sprayer with 50 mesh or coarser screens. Calibrate sprayers before applying. Use at least 20 gallons of water per acre, as more water provides better coverage. Rate will vary depending on turf species, length of control desired (higher rates mean longer control) and number of applications. Do not exceed the highest rate listed per species in a calendar year.

Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care's local distributor network for responsive service and support. You can also direct any questions regarding Knighthawk to 1-888-240-8856 for prompt attention.
