NOT FOR FOLIAR APPLICATION

INFORMATION

Dyna-Phos is a liquid foliar formulation designed for soil application as a drench or irrigation supplement. **Dyna-Phos** may be applied through drip-tape or micro-sprinkler irrigation systems to prevent calcium carbonate buildup resulting from hard irrigation water. **Dyna-Phos** is comprised of ortho-phosphate a readily available form of phosphorous that will stimulate root growth and lower the soil pH.

CROP RECOMMENDATIONS

Citrus and Fruit Crops: Apply as a soil drench at the rate of 1 to 2 gallons per acre. Apply to a moist soil or water in after applications.

Vegetable and other crops (including: beans, cabbage, cantaloupe, celery, cucumber, eggplant, endive, lettuce, greens, peas, melons, pepper, potatoes, squash, strawberries, sweet corn and tomatoes): Apply 1 to 2 gallons per acre as a soil drench at least 30 days after planting or inject through the drip or micro-irrigation system.

Turf, Tees & Greens: Apply 1 to 2 gallons per 1000 gallons of irrigation water to reduce calcium carbonate build-up and supply necessary available phosphate.

DIRECTIONS FOR USE

Dyna-Phos should be applied as needed starting with the first spray at 1 to 2 quarts per application in enough water to allow for thorough coverage but not run off. **Aerial**

Application: 1 quart per acre in 5 to 15 gallons of water.
