

STUMP REMOVER

SPEEDS THE DECOMPOSITION OF UNSIGHTLY TREE STUMPS
FOR EASY REMOVAL OR BURNING.

This product speeds the natural decomposition of the stump. This leaves the stump porous for easy removal manually or allows for easy burning.

DIRECTIONS FOR USE

For the removal of stumps up to 1 foot in diameter, drill a 1" hole in the center of the stump about 1 foot deep. Drill an additional 1" hole into the side of the stump about 3" below the top. This hole should slant down to connect or nearly connect to the bottom of the first hole. For stumps over 1 foot in diameter, drill several sets of holes.

Pour about 1/4 lb. of Stump Remover in each hole. Fill each hole with water. Allow to stand at least 6 weeks before removal is attempted. For manual removal, a longer time may be desirable. If rainfall is infrequent, soak stump with water occasionally.

To burn stump, fill the holes with kerosene or fuel oil. Allow time for the liquid to completely absorb. Then pour a slight amount of kerosene or fuel oil over the stump and ignite. **WARNING:** Allow at least 4 weeks before attempting burning. Mixtures of Stump Remover concentrate and kerosene or fuel oil can form an explosive mixture.

KEEP OUT OF REACH OF CHILDREN

CAUTION: May be harmful if swallowed. Avoid contact with eyes and skin. Wash thoroughly after handling.

CAUTION: CONTAINS POTASSIUM NITRATE, AN OXIDIZER. POSSIBLE FIRE HAZARD.
