

Dismiss® Turf Herbicide

Nutsedge control in days – not weeks.

Enjoy visible results in two days.

Unsightly weeds don't just attack your fairways, they attack your reputation as well. Dismiss herbicide protects both by quickly controlling yellow nutsedge, purple nutsedge and green kyllinga. The unique mode of action works to eliminate tough sedges faster than any other leading product on the market, giving you visible results in only two days.

I saw visible results in two days with Dismiss, with the nutsedge really turning after only three or four days. Dismiss exceeded my expectations because of its speed of control and because it's effective with just one application. It's saving me time and money by eliminating re-sprays, which require additional labor and equipment. I can go out in May and spray Dismiss and then not have to look at the weed again.

– **Richard McDanel**, Golf Course Superintendent
Pine Lake Golf Course, Charlotte, N.C.

Dismiss®
TURF HERBICIDE

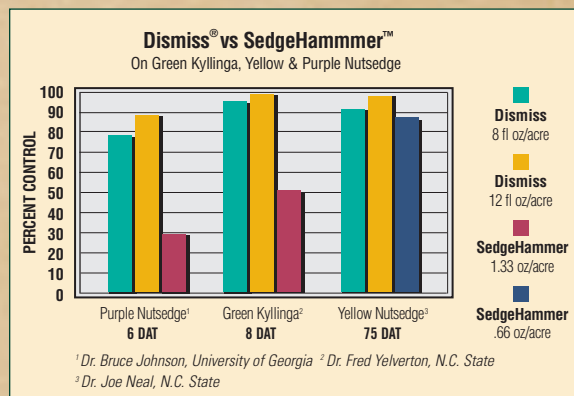

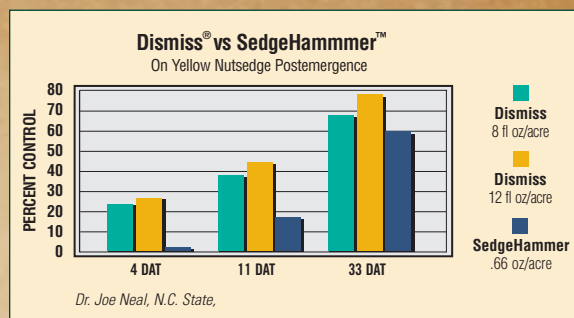

Dismiss® turf herbicide gives you superior control.

Turf management professionals know that yellow nutsedge, purple nutsedge and green kyllinga are among the toughest weeds to control. They grow faster, stand taller and are lighter in color than surrounding turfgrasses. That's why we formulated Dismiss herbicide to provide the industry's most complete control of the toughest sedges.

In fact, just one application may be all you need to achieve season-long control of yellow nutsedge*— saving you time and money on re-spraying. Plus, data from a leading university shows 96-percent control of yellow nutsedge eight days after treatment ... a level of control the leading competitors can't touch. And because Dismiss herbicide uses proven chemistry, you can use it with confidence.

“Other chemicals make claims of good control, but nothing kills nutsedge like Dismiss. It really stands up to its claims. It also saves me time and money because I don't have to do multiple applications to control the nutsedge. I wouldn't hesitate to recommend Dismiss to other golf course superintendents; in fact, I already have. Dismiss is a great chemical, and I'm extremely pleased with it.

— **Robby Acosta**, Golf Course Superintendent
Country Club of Sapphire Valley, Sapphire, N.C.

Turf flexibility with preemergent broadleaf control.

Warm season grasses ... cool season grasses ... whatever your situation, studies show that Dismiss herbicide is well tolerated on more than 13 common turf grasses. So you can rest easy knowing Dismiss herbicide offers you maximum control with minimum risk to the turf you've already worked so hard to establish. And what's more, you'll see fewer broadleaf weed problems in the areas you treat for sedges.

“I have noticed zero stress or damage to the grass where I applied Dismiss, and there has been no discoloration to the turf. I would recommend Dismiss to other golf course superintendents because, in my opinion, it's the chemical of the year.

— **Fred Gehrisch**, Golf Course Superintendent, Highland Falls Country Club, Highland, N.C.
